

MAUS Stixx PRO V1 Automatic Fire Protection Unit 0.2 m³

The MAUS Stixx PRO V1 is a compact automatic fire protection unit designed for small, critical spaces where reliable protection is essential. It delivers effective passive fire suppression in areas up to 0.2 m³, with a flexible design that makes it ideal for installations where larger units will not fit.

- Protects enclosed spaces up to 0.2 m³
- Activates automatically at 170 °C
- Scalable design with external heat-detecting cable
- Non-toxic and environmentally friendly extinguishing agent
- Maintenance-free operation with a 5-year lifespan

Protects enclosed spaces up to 0.2 m³

The Stixx PRO V1 is built to protect compact spaces where fire risk can have serious consequences. It is well suited for small machinery compartments, electrical enclosures, and other tight installations that require dependable automatic fire protection without taking up unnecessary space.

Activates automatically at 170 °C

The unit responds quickly when exposed to dangerous heat. Activation occurs when the heat-detecting cable is exposed to flames or when the unit reaches 170 °C, helping to stop a fire at an early stage. Once triggered, it releases its full contents automatically to suppress the fire within seconds.

Scalable design with external heat-detecting cable

What makes the V1 especially versatile is its extended heat-detecting cable positioned outside the main unit. This allows multiple units to be connected for broader coverage in confined areas where larger fire protection models are not practical. It is a flexible solution for installations that require tailored protection.

Non-toxic and environmentally friendly extinguishing agent

The Stixx PRO V1 uses a patented potassium-based formula that absorbs heat and interrupts the fire's chemical reaction. The agent is non-toxic and environmentally friendly, making it a safer choice for sensitive spaces where clean and effective fire suppression is important.

Maintenance-free operation with a 5-year lifespan

This unit is designed for simple, dependable protection without the need for a complex system. It requires no electrical wiring, no batteries, and no pressurised components. With maintenance-free performance throughout its 5-year lifespan, it offers long-term protection with minimal effort.

Product specifications:

- Brand: MAUS
- Product name: Stixx PRO V1 Automatic Fire Protection Unit 0.2 m³
- Protected volume: up to 0.2 m³
- Activation temperature: 170 °C
- Discharge type: full flooding discharge
- Extinguishing agent: patented potassium-based formula
- Agent properties: non-toxic and environmentally friendly
- System type: passive automatic fire protection
- Power requirement: none
- Batteries required: no
- Pressurised system: no
- Maintenance: maintenance-free
- Service life: 5 years
- Suitable for: small machinery compartments, compact electrical enclosures, and other tight protected spaces
