myFirst 3dPen Make Filaments Fun Pack - Insect Adventure

myFirst 3dPen Insect Adventure PCL filament refill pack gives children a safe and structured way to create 3D insect designs with the myFirst 3dPen Make. With low-temperature PCL filament, guided templates and a battery-powered motion module, children can draw, build and bring their creations to life while developing creativity and fine motor skills.

- Low-temperature PCL made for children
- Insect Adventure templates for guided drawing
- 13 filament rolls for creative projects
- Motion module to bring creations to life
- Supports creativity, motor skills and spatial thinking

Low-temperature PCL made for children
The filament is made from low-temperature PCL material, designed for safer use with the myFirst 3dPen Make. It allows children to draw directly on templates or paper with reduced heat risk, making it suitable for supervised creative play at home.

Insect Adventure templates for guided drawing
The set includes five ready-to-use drawing templates based on the Insect Adventure theme. These templates help children follow clear shapes and build confidence as they create their own 3D insects and themed designs.

13 filament rolls for creative projects
With 13 PCL filament rolls included, children have a variety of material for drawing, building and experimenting. The refill pack is ideal for extending playtime with the myFirst 3dPen Make and for completing multiple guided projects.

Motion module to bring creations to life
The included battery-powered movement module adds an interactive element to selected creations. Children can attach their designs and see them move, adding an extra level of engagement to the 3D crafting experience.

Supports creativity, motor skills and spatial thinking
Using the filament pack helps children practise hand control, shape recognition and three-dimensional thinking. It encourages focused, hands-on activity while giving young creators the freedom to design and personalise their work.

Package includes:

- 5 drawing templates
- 13 PCL filament rolls, total 26 m
- 1 battery-powered movement module
- 1 thermoplastic sheet
