

Satechi ExtendView USB4 Dual HDMI Multiport Adapter - Space Black

Connect two external displays, charge your laptop and add four high-speed data ports through one USB-C connection. The Satechi ExtendView USB4 Dual HDMI Multiport Adapter runs two 4K displays at 60Hz on compatible Mac and Windows computers without drivers or DisplayLink software, so it also works on company laptops where you cannot install software. The compact Space Black aluminium body has a built-in slot for its attached cable, ready to go in your bag.

- Dual 4K 60Hz displays without drivers
- Up to 140W pass-through charging
- Four 10Gbps USB data ports
- Works with Mac, Windows and ChromeOS
- Built-in cable storage for travel

Dual 4K 60Hz displays without drivers

Run two external displays at up to 4K and 60Hz. Plug in and both screens switch on. There are no drivers to install, no background apps and no screen recording permissions to grant, because ExtendView uses the computer's native USB4 display support instead of DisplayLink software. This also makes it suitable for IT-managed laptops where software installation is restricted. Dual extended display support depends on your computer.

Up to 140W pass-through charging

Connect your laptop charger to the adapter and charge at up to 140W through the same cable that runs your displays and accessories. One connection to your laptop means fewer cables on your desk. Charging power depends on the charger used and your laptop's supported charging rate.

Four 10Gbps USB data ports

Two USB-C and two USB-A ports each support transfer speeds up to 10Gbps. Connect external drives, card readers and other accessories, and move footage, project files and backups without hunting for a free port.

Works with Mac, Windows and ChromeOS

Use the same adapter, displays and accessories when you switch between a MacBook and a Windows laptop. Two external displays work with MacBook Air M3 and later, base MacBook Pro M3 and later, and MacBook Pro with M1 Pro or M1 Max and later. On the M3 MacBook Air and base M3 MacBook Pro, the laptop lid must be closed to use two displays. Base M1 and M2 MacBooks and iPad Pro M4 and M5 support one external display. The adapter also works with Mac mini, Mac Studio, recent Microsoft Surface models and Windows laptops from Dell, HP, Lenovo and Alienware. macOS does not support MST for extended displays, so dual display support on Mac is set by Apple.

Built-in cable storage for travel

When you pack up, the attached USB-C cable clips into its own slot in the body, so it does not tangle or rattle loose in your bag. The anodised Space Black aluminium finish matches the MacBook Pro and measures 141 x 60 x 20 mm.

Package includes

- 1 x Satechi ExtendView USB4 Dual HDMI Multiport Adapter
- 1 x User manual

Product specifications

- Brand: Satechi
- Product: ExtendView USB4 Dual HDMI Multiport Adapter
- Model: ST-PU4EVC
- Colour: Space Black
- Material: Anodised aluminium
- Host connection: Attached USB-C cable with USB4 technology
- Display ports: 2 x HDMI
- Maximum display output: Two external 4K displays at 60Hz on compatible computers
- Charging: USB-C Power Delivery pass-through, up to 140W, depending on charger and connected device
- Data ports: 2 x USB-C, 2 x USB-A, up to 10Gbps each
