

Attention!

Must be complemented with iotty Smart Switch single button faceplate !

iotty Smart Switch model LSWE21 is a wireless light switch for modern homes that want reliable control, clean design and smart automation in one solution. It replaces a traditional switch, gives you app control wherever you are and lets you manage lighting and connected devices with precision. Please note that this unit must be completed with an iotty Smart Switch single button faceplate, sold separately.

- App control with manual operation
- Easy replacement for existing switches
- Flexible settings for different installations
- Smart automation and energy monitoring
- Premium Italian design with broad compatibility

App control with manual operation

The iotty Smart Switch model LSWE21 lets you control your lighting and connected devices directly from your smartphone through the iotty app for Android and iOS. You can also operate it manually, both with and without Wi-Fi, which means everyday use remains simple and dependable even if your internet connection is unavailable.

Easy replacement for existing switches

This smart switch is designed to replace an existing wall switch with a neat and modern solution. Installation is straightforward for the right electrical setup, and the switch is suitable for homes that have both Line and Neutral wires available. Once installed, it becomes a natural part of your home while adding smart control in the background.

Flexible settings for different installations

Each switch can be configured to match how you want it to work. It can be set as a standard on and off switch, as a push-button that only lets power flow while pressed, or for multi-way switching via Wi-Fi. This makes it easier to adapt the switch to different rooms, routines and user preferences. Multi-way switching via Wi-Fi works between multiple iotty switches.

Smart automation and energy monitoring

The smart features are designed to make daily life more convenient and more efficient. You can create automation based on geolocation, time of day, sunrise, sunset or local weather conditions. Away mode can simulate activity when you are not home, and the app also lets you monitor energy consumption from connected devices. The backlight can be dimmed to better suit the room and time of day.

Premium Italian design with broad compatibility

The iotty Smart Switch is fully designed in Italy and created with a strong focus on quality, finish and long-term performance. It follows CE certification requirements and has been tested and approved by TÜV. It also integrates with leading smart home platforms including Google Home, Amazon Alexa, Siri Shortcuts, SmartThings and IFTTT, making it easier to fit into your existing smart home setup.
