Sensibo

Sensibo

### FUNCTIONS

As well as automation, the app gives you a full overview of the indoor climate in your home. You can find information about temperature, humidity, air quality, and more. Schedule and control with geofencing and monitor everything wherever you are via the Sensibo app. You can also activate the winter mode to provide frost protection, so that the temperature never falls below 5 degrees. However, this requires that your air source heat pump supports this.

### INSTALLATION

Sensibo Air is easy to install. All that is needed is a smartphone, the Sensibo app, and access to a WiFi network (2.4 GHz).

### CALCULATION EXAMPLE

The calculation is based on a modern standard villa that consumes 20,000-25,000 kWh per year. Without other external heat source. Direct electric heating together with heat pump.

Calculation of 25,000 kWh per year:  
(SEK 137,500 SEK 5.50/kWh = SEK 377/day).

Save up to SEK 55,000 per year and lower your daily cost to SEK 115.

(Kwh SEK 5.50, electricity area 4, 23.01.03)

Your actual cost is based on which air source heat pump you have, age of your house, insulation etc.

### CONTAINS

- Sensibo Air unit
- USB cable 1.2 m (USB-A/Micro-USB)
- Product sheet

Please note that no power adapter is included in the package. A USB adapter (like the one you use for your phone) can be used to power the Sensibo Air.

### FACTS

Sensibo Air works with all heat pumps with IR remote controls.

**Control unit dimensions:** 67 x 67 x 17 mm

**Communication:** WiFi, IR, Bluetooth

**Compatible with:**

Apple Homekit and Google Home

**Compatible voice assistants:**

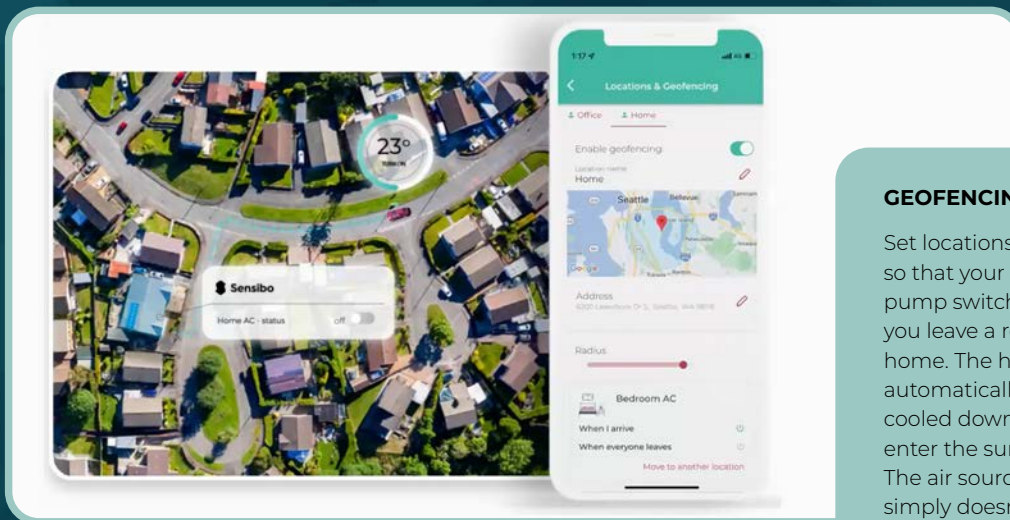

Google Assistant, Amazon Alexa and Apple Siri

**Warranty:** 1 year from manufacturer

### SMART SCHEDULES

Make sure the air source heat pump never runs when the house is empty by setting a schedule according to what times and days you are home.

### GEOFENCING

Set locations and distances so that your air source heat pump switches off when you leave a room or leave home. The heat can be automatically turned on or cooled down as soon as you enter the summer house. The air source heat pump simply doesn't use energy when you aren't around.
